

Data connect — User Guide

DCM Dashboard · Multi-cloud observability (Azure + AWS)

1. What is Data connect?

Data connect is the web interface for **DCM (Data Connect Monitoring)**. It gives you a single place to monitor:

- Pipelines and data platforms (Azure Data Factory, Databricks, databases)
- Costs and FinOps
- Security alerts and governance checks
- User identities across clouds
- Data collection health

2. Sign in

Environment	Behaviour
Production	Microsoft Entra ID (company SSO)
Development	Auth may be disabled — you land directly on the dashboard

After sign-in you are redirected to **Home** (`/dashboard`).

3. Interface layout

Every page shares the same structure:

Sidebar (menu)	Header – filters, notifications, dates
	Page content

Sidebar (left)

- Navigate between modules
- Expandable sections: **Data Factory**, **Databricks**, **Databases**
- Bottom: your avatar → **light/dark theme**, **Sign out**
- Collapse/expand with the arrow button (useful on smaller screens)

Header (top)

Available on most pages:

Control	Purpose
Notifications (bell)	Recent alerts
Landing zone	Filter data to one or more landing zones

Databricks workspace	Filter Databricks pages to specific workspaces
Date range	Start / end dates + presets 30d · 90d · 6m · 1y
Refresh	Reload current page data

Global filters apply to all modules except **Talk to Data** and **Administration**.

4. Navigation map

Menu item	What you see
Home	Cross-platform KPIs and quick links to modules
Data Factory	ADF pipelines, alerts, FinOps, governance
Databricks	Jobs, clusters, Unity Catalog, data product usage, reports
Databases	Azure/AWS databases — performance, alerts, costs, governance
Clusters	Compute clusters (EMR, etc.)
Global FinOps	Consolidated multi-cloud costs
Global Alerts	Alerts across all platforms
Cloud security	Security alerts
Standard Checks	Compliance / governance checks
Users	Identity inventory (Databricks, AWS IAM, Azure AD)
My Landing Zones	Your access rights + request access
Talk to Data	AI assistant (Databricks Genie) — natural language queries
Collection status	End-to-end data pipeline health
Settings	Theme, backend test, notification preferences
Administration	Super-admin only

5. Key screens

5.1 Home

Operational overview for the selected period and landing zones. KPI cards link to detailed modules.

Typical use: start your day here — check health, then drill into a module.

5.2 Data Factory

Monitor Azure Data Factory pipelines, failures, costs, and governance.

Sub-pages (sidebar submenu):

- **Dashboard** — overview
 - **Pipelines** — run history and failures
 - **Alerts** — ADF-specific alerts
 - **Costs & FinOps** — spend breakdown
 - **Governance** — compliance checks
-

5.3 Databricks

Jobs, clusters, workspaces, Unity Catalog, and data product usage.

Use the **workspace filter** in the header to narrow results to one Databricks workspace.

Sub-pages:

- **Dashboard** · Alerts · Costs & FinOps · Governance

- **Unity Catalog** — catalog explorer
- **Data Product Usage** — consumption metrics
- **Monitoring Reports** — scheduled reports

5.4 Global FinOps

Multi-cloud cost view across Azure and AWS.

Typical use: compare spend by service, cloud provider, or landing zone over a period.

Module-specific FinOps pages also exist under Data Factory, Databricks, and Databases.

5.5 Talk to Data

Ask questions in plain English. Powered by **Databricks Genie** on your DCM data.

Example questions:

- *Compare my Azure and AWS costs for this month*

- Which pipelines are failing?
- Analyze the security of my databases
- What is my governance score?

Click **Open DataIQ** to start the chat. No date/landing-zone filters on this page.

5.6 My Landing Zones

See which landing zones you can access. Request access for zones you do not have.

The screenshot displays the 'My Landing Zones' interface. On the left is a vertical sidebar with icons for various data management functions: a multi-colored 'T' logo, a grid, a bar chart, a flow diagram, a database cylinder, a document, a dollar sign, a bell, a shield, and a checkmark. At the bottom of the sidebar is a red 'ZM' button with a dropdown arrow. The main content area has a title 'My Landing Zones' with a back arrow. Below the title is a notification bell icon and a message 'Landing zones unavailable' with a dropdown arrow. Two date filters are present: 'From 12/05/2026' and 'To 11/06/2026'. Below these are four time range buttons: '30d' (selected), '90d', '6m', and '1y'. An orange banner states 'Landing Zone metadata unavailable.' Below this is instructional text: 'Click a landing zone with access to open the dashboard filtered on it.' A 'Refresh' button is located to the right. At the bottom, a red error box contains a warning icon, the text 'Loading error', and the message 'Authentication token unavailable. Please sign in again.'

Workflow:

1. Open **My Landing Zones**
 2. Find a zone marked **denied** or without access
 3. Click **Request access**
 4. Wait for admin approval
 5. Once granted, click the zone to open Home filtered on that LZ
-

5.7 Settings

UI preferences and backend connectivity.

Section	Action
Theme	Toggle light / dark mode (saved in browser)
Backend DCM	Health status of dcm-backend
Test backend	Manual connectivity check
Notifications	Choose which alert domains appear in the bell

5.8 Collection status

End-to-end health of the data collection chain:

Cloud agents → Ingestion API → SQS → Databricks jobs → Unity Catalog → Backend → Frontend

6. Common workflows

Monitor platform health

1. Go to **Home**
2. Set period (e.g. **30d**)
3. Select landing zone if needed
4. Click a module card for details

Investigate costs

1. **Global FinOps** (or module FinOps page)
2. Adjust date range and landing zone
3. Explore by service / resource

Triage alerts

1. **Global Alerts** or module alerts page
2. Filter by severity / status
3. Open alert detail

Check who is inactive

1. **Users**
2. Look for users inactive **> 90 days** (highlighted in red)
3. Filter by identity type (Databricks, AWS IAM, Azure AD)

7. Notifications

- **Bell icon** (header) — recent alerts
- **Settings → Notifications** — choose domains and landing zones
- Critical security alerts always remain visible for your role

8. Roles

Role	Access
Standard user	Modules allowed by landing-zone scope
Super admin	All modules + Administration

9. Troubleshooting

Symptom	What to do
<i>Landing zones unavailable</i>	Backend down or no LZ metadata — check Collection status
<i>Workspaces unavailable</i>	Same for Databricks workspaces
<i>Loading latest view... (stuck)</i>	Click Refresh ; check Settings → Test backend
<i>Authentication token unavailable</i>	Sign out and sign in again

Empty charts / tables	Widen date range; verify you have LZ access in My Landing Zones
Degraded on Collection status	Inspect component list; contact platform team if backend or Databricks is down

10. Export to PDF

From the repo root:

```
# Option A – VS Code / Cursor: open this file → Print → Save as PDF

# Option B – pandoc (if installed)
pandoc packages/dcm-frontend/docs/user-guide/USER_GUIDE.md \
  -o packages/dcm-frontend/docs/user-guide/USER_GUIDE.pdf \
  --resource-path=packages/dcm-frontend/docs/user-guide

# Option C – npx (no install)
npx md-to-pdf packages/dcm-frontend/docs/user-guide/USER_GUIDE.md
```
